The human NR4 amino acid sequence was adduced from a composite DNA sequence (AAT66165) derived from bone marrow cDNA clones. Recombinant NR4, or fusion proteins including NR4, can be produced in transformed host cells. The receptor molecules and their components are useful in the development of a range of agonists, antagonists, therapeutics and diagnostic reagents based on ligand interaction with its receptor, esp. for the development of cpds. capable of modulating the activity of IL-13 and related cytokines such as interleukin-4 for the treatment of allergy,

                                                                                                                                                                                                                                                                                                                                                                                                                                      CC This sequence represents interleukin-13 (II-13) alpha receptor. The CC invention relates to new purified peptides comprising 380 or 427 amino CC acid sequences, which are receptors for interleukin-13 (II-13); the 380 CC and 427 am proteins are designated II-13R beta and alpha respectively. CC The II-13R beta has high affinity for II-13R while II-13R alpha has low CC affinity, but acquires high affinity when associated with the II-4 CC receptor. Nucleic acids encoding II-13R beta and alpha are used as CC diagnostic probes to identify aberrant synthesis or genetic anomalies such as loss of heterozygosity and rearrangements, or chromosomal CC anomalies. They are also used for production of recombinant II-13R beta and alpha which can be used as II-13 antagonists, specifically to regulate II-13-induced responses for treatment of inflammation and CC regulate II-13 receptors are also useful as antisense molecules for gene therapy (blocking synthesis of II-13R). Antibodies are used (in standard immunoassays) to diagnose diseases associated with abnormal expression of CI I-13R receptors; when coupled to a toxin also for treatment of coverproduction of II-13R. Cells that express II-13R at the surface are used to identify ligands and modulators of II-13R
                                                                                                                                                                                                                                                                                                                                                               Matches 426;
